

Storage Tanks Accessories & Systems

To complete your storage tank installation, One Clarion offers a full range of accessories and system components. These accessories ensure your tank is safe, functional, and compliant.

Sensors: Monitor liquid levels in your tanks remotely and continuously with our range of sensors designed for large storage tanks. Get real-time visibility into temperature, tank level, and tank tilt—plus track water usage for industrial processes, trigger alarms when water is used for fire suppression, and help prevent theft, waste, and abuse. Built on one of the most reliable networks available, our devices support LoRa, cellular, Bluetooth, satellite, or SCADA connectivity. An easy-to-use app lets you monitor your tanks from anywhere in the world, right from the palm of your hand.

Heaters: We offer a wide range of immersion heaters for storage tanks to help prevent freezing during cold weather and keep your operation running smoothly. Options can be customized to match your tank, temperature requirements, and process needs.

OSHA Ladders, Platforms, & Walkways: Add accessories that help keep your tank OSHA-compliant and make routine inspection and maintenance safer and easier. We supply OSHA-compliant ladders, platforms, walkways, manways, and complete access steelwork for safe tank operation—including exterior ladders with fall-protection cages, top-platform walkways, roof handrails, and perimeter guardrails designed to OSHA standards. For large field-erected tanks, we can also provide spiral staircases and catwalks as required. All access steelwork is corrosion-protected (galvanized or painted) and engineered for live loads.

Internal Liners & Coatings: We supply factory-applied internal coatings for most of our tanks, with options tailored to your application. Coatings range from NSF/ANSI 61-compliant systems for potable drinking water to linings compatible with select chemicals. An internal coating can eliminate the need for a separate liner. For applications that do require a liner, we can also provide NSF/ANSI 61-approved liners for potable water tanks.
